333000 SANITARY SEWER

PART 1: GENERAL

1.01 SUMMARY

A. Sanitary Cover shall be 24 inch diameter and non-perforated.

B. Sanitary lines must always be straight from manhole to manhole unless it has been approved by the Utilities Department. Toner wire required if pipe section is not a straight line.

C. All pipe intersections shall be made within a manhole.

D. Design drawings shall include the profile of sanitary piping and crossing existing Utilities.

E. Sanitary piping shall be SDR35 unless under building structures where pipe shall be oversized ductile iron.

F. Sanitary Utility Pumping Stations: All packaged lift and pumping stations shall be submitted to the Utilities Department for review, and must comply with State Department of Health and DEC regulations.

G. Sanitary Utility Piping: Submit TV video of all piping to Utilities for review prior to acceptance.

H. Connecting to existing sanitary sewer manhole: Provide Quik-look manhole boot connector, or approved equal, for cast-in-place pipe to manhole connectors. Provide Kor-n-seal pipe to manhole connectors, or approved equal, for cored holes in existing manholes.
